STAR ROLLER

Eliminates Product Damage

With the combination of the Star Roller™ and SlipTorque®, we can gently handle your stacked paper products. Unlike traditional conveyors, the loose-fit rollers stop under your product when it stops to accumulate - virtually eliminating any fanning or creeping of the bottommost sheets of paper.

Shuttleworth's Star Roller™ solves the paper industry's shingling problem. Unlike round rollers that cause the bottom sheets of stacked paper to fan, the design of the Star Roller™ greatly reduces or eliminates the "fanning" or "creeping" that occurs as the stack is conveyed. The thicker the paper and the smaller the stack, the better the results.

Increases Productivity and Throughput

The cut sheet paper industry can finally benefit from flawless accumulation - increasing throughput and productivity, while reducing product damage and hours of operating time. Accumulation reduces total line delays by allowing operable machines to continue production for a cost-effective period of time when other in-line machinery is down.

Satisfaction Guaranteed

With an entire team of professionals dedicated to sales and service, we're committed to your satisfaction. With more than 45 years of experience, we have the know-how to help assist you with whatever you may need, including the modification and reconfiguring of any equipment. After all, we've installed and serviced more than 18,000 systems worldwide.

Star Roller™ has changed the way the paper industry moves cut sheet paper between processes.
